Strategic Development Addendum to the MYDENTALWIG Executive Highlight

Project Platform

MYDENTALWIG is developing a vertically integrated ecosystem at the intersection of AI healthcare, advanced manufacturing, private data systems, energy infrastructure, and smart industrial real estate.

The platform is designed as a closed-architecture system in which device manufacturing, AI diagnostics, data infrastructure, and physical development environments operate as a unified innovation engine.

The long-term objective is to create durable industrial and healthcare infrastructure capable of supporting large-scale medical innovation, manufacturing resilience, and next-generation AI-driven healthcare systems.

Core Industrial & Technology Foundations

• Integrated Device Manufacturing (IDM)
AI-enabled dental and medical devices, advanced biosensors, and precision healthcare hardware produced through tightly integrated R&D and manufacturing systems.

• Private AI Healthcare Data Systems
Closed datasets generated through proprietary healthcare platforms enabling predictive diagnostics, treatment optimization, and preventive care.

• GigaFactory Manufacturing Ecosystems
Large-scale U.S.-based innovation campuses integrating research laboratories, advanced manufacturing, training facilities, workforce housing, and AI compute infrastructure.

• Energy & Infrastructure Resilience
Solar-first microgrid architecture and resilient energy infrastructure designed to support continuous operations, private AI computing capacity, and secure data environments.

These integrated components are designed to generate high-margin recurring revenue through device manufacturing, healthcare services, AI diagnostics platforms, consumables, and infrastructure-linked assets.

Flagship Development Concept

As part of the broader ecosystem strategy, MYDENTALWIG is exploring the development of a flagship innovation district anchored by a landmark gateway structure conceptually referred to as the "**Trump Arch of Triumph**," serving as the ceremonial entrance to a grand boulevard concept known as **Farms-Élysées**.

This flagship district would function as a public-facing gateway to a larger integrated ecosystem of healthcare innovation, advanced manufacturing, agricultural technology, education, and tourism.

Potential district elements may include:

• Innovation and manufacturing campuses
• Agricultural technology and food innovation showcases
• Cultural and educational institutions
• Hospitality and tourism infrastructure
• Public gathering spaces and national events venues
• Workforce housing, research institutes, and training centers

The intent is to create a destination that symbolically represents American innovation while supporting the operational infrastructure of the MYDENTALWIG ecosystem.

Investment Structure

Participation in this early stage of development is being offered through a Simple Agreement for Future Equity ("SAFE").

The SAFE provides investors with the contractual right to receive equity in a future financing round or corporate structure associated with the development and expansion of the MYDENTALWIG platform and related infrastructure initiatives, subject to the terms described in the SAFE agreement.

Strategic Investment Highlights

• Vertically Integrated Industrial Platform
Ownership of manufacturing, data, AI systems, and infrastructure creates compounding competitive advantage.

• Private Data Advantage
Closed healthcare datasets enable defensible AI models and long-term platform value.

• Large-Scale Manufacturing & Infrastructure Strategy
Gigafactory-style innovation campuses designed to accelerate R&D, production, and talent development.

• Multiple Revenue Engines
AI platforms, device manufacturing, consumables, diagnostics services, infrastructure assets, and real estate-linked income streams.

• National-Scale Development Vision
Flagship innovation districts combining industrial capability with cultural and public-facing landmark development.
