Ariane Neyou, MD
Cardiologist Orlando

January 19, 2025

To Whom It May Concern,

I am writing to express my strong support for MyDentalWig, an innovative startup in which my family has invested. As a cardiologist, I am particularly excited about the groundbreaking technology they are developing, which features a chip embedded in a dental device that sits on the gum tissue, strategically positioned near the arteries.

This innovative non-invasive approach provides unprecedented access to data from the arteries, significantly enhancing our diagnostic capabilities in cardiology. The ability to monitor arterial health in real-time through a dental device could transform our understanding and management of cardiovascular conditions, leading to earlier detection and improving patient outcomes.

Additionally, the ingenuity of converting the energy generated from chewing and swallowing into electricity to continuously power the chip is nothing short of brilliant. This feature not only ensures the device remains operational without the need for external power sources but also demonstrates seamless integration into patients' daily lives.

I firmly believe that MyDentalWig's innovation represents a significant advancement in both dental and cardiovascular health. I am proud to support their mission and look forward to the positive impact this technology will have on patient care.

Sincerely,

Ariane Neyou, MD
